

135-1 Separation fork

APPLICATION IMAGE

DESCRIPTION

The Series 135 separating forks are used for loosening ball pin joints wedged in the cone seat, for loosening steering column levers, for removing shock absorbers and for other separating work of all kinds in the automotive and industrial sectors. Their universal applicability makes the separating forks an important companion for Removing and separating work.

RANGE OF APPLICATION

For loosening ball-and-socket joints wedged in the conical seat, for loosening steering column levers, for dismantling shock absorbers and for all kinds of other separating work

BENEFIT

- The range includes sizes with different fork openings for use in every case

OPERATION

- Place the Separation fork on the part to be cut off
- Lever the part loose with targeted hammer blows
